ACKNOWLEDGMENTS

We would like to deeply thank the various people who, during the long preparation of this endeavor, provided us with qualified and helpful assistance. Without their care and consideration, this book would likely not have matured.

First, we would like to thank all the chapter contributors, for their dedication and interest, and for all their patience throughout the peer review procedure and the complex editing and cross-reviewing process, which constitutes a rather difficult balancing act.

Second, we would like to thank Zeta Books for its interest in publishing this book and particularly Professor Lester Embree for his nice feedback and invaluable insights, but also his encouragement throughout the overall process.

Third, we would like to thank the Department of Cognitive Sciences and Education, University of Trento and its director, Professor Franco Fraccaroli, for generously providing us with the staff and resources to undertake this work.

Finally, we would like to thank Dr. Elisabeth Behnke for her continued support, competent and passionate, throughout the editing of this book.

Massimiliano Tarozzi, Luigina Mortari
